For orders only: 1.800.323.4060

- Ready-to-use, single-use intermittent catheter
- Hydrophilic-coated PVC catheter
- Protective tip and sleeve supports no-touch insertion technique
- 2 smooth catheter eyelets
- Color-coded funnel
- Adhesive tab for adhering packaging to a surface

This intermittent catheter is a flexible tubular device that is inserted through the urethra by male, female, and pediatric patients who need to drain urine from the bladder.

WARNING: To help reduce the potential for infection and/or other complications, do not reuse. If discomfort or any sign of trauma occurs, discontinue use immediately and consult your healthcare practitioner.

PRECAUTION: Please consult a medical professional before using this product if any of the following conditions are present: Severed urethra, unexplained urethral bleeding, pronounced stricture, false passage, urethritis – inflammation of the urethra, prostatitis – inflammation of the prostate gland, epididymitis – inflammation of the epididymis (testicle tube). Self-catheterization should follow the plan of care and advice given by your healthcare practitioner and be carried out only in accordance with the instructions for use provided. Because catheterization frequency varies by person, the recommended frequency of your catheterization should be provided by your healthcare practitioner. For any other questions about your catheterization, please contact your healthcare practitioner.

CAUTION: Rx Only. Federal (USA) Law restricts this device to sale by or on the order of a physician or other healthcare practitioner licensed under state law to order this product. Prior to use of this device, be sure to read (i) the complete information on how to use this device including Warnings, Cautions, and Instructions for Use, and (ii) all other package inserts and labels supplied with the product.

Continence Care
People First

Patients benefit from an intermittent catheter that can be easily gripped and manipulated – especially important for those with limited dexterity

For patients, keeping or achieving their independence can be everything

Balancing intermittent self-catheterization with daily life can be a challenge

Learning to catheterize can create apprehension and challenges[1, 2]

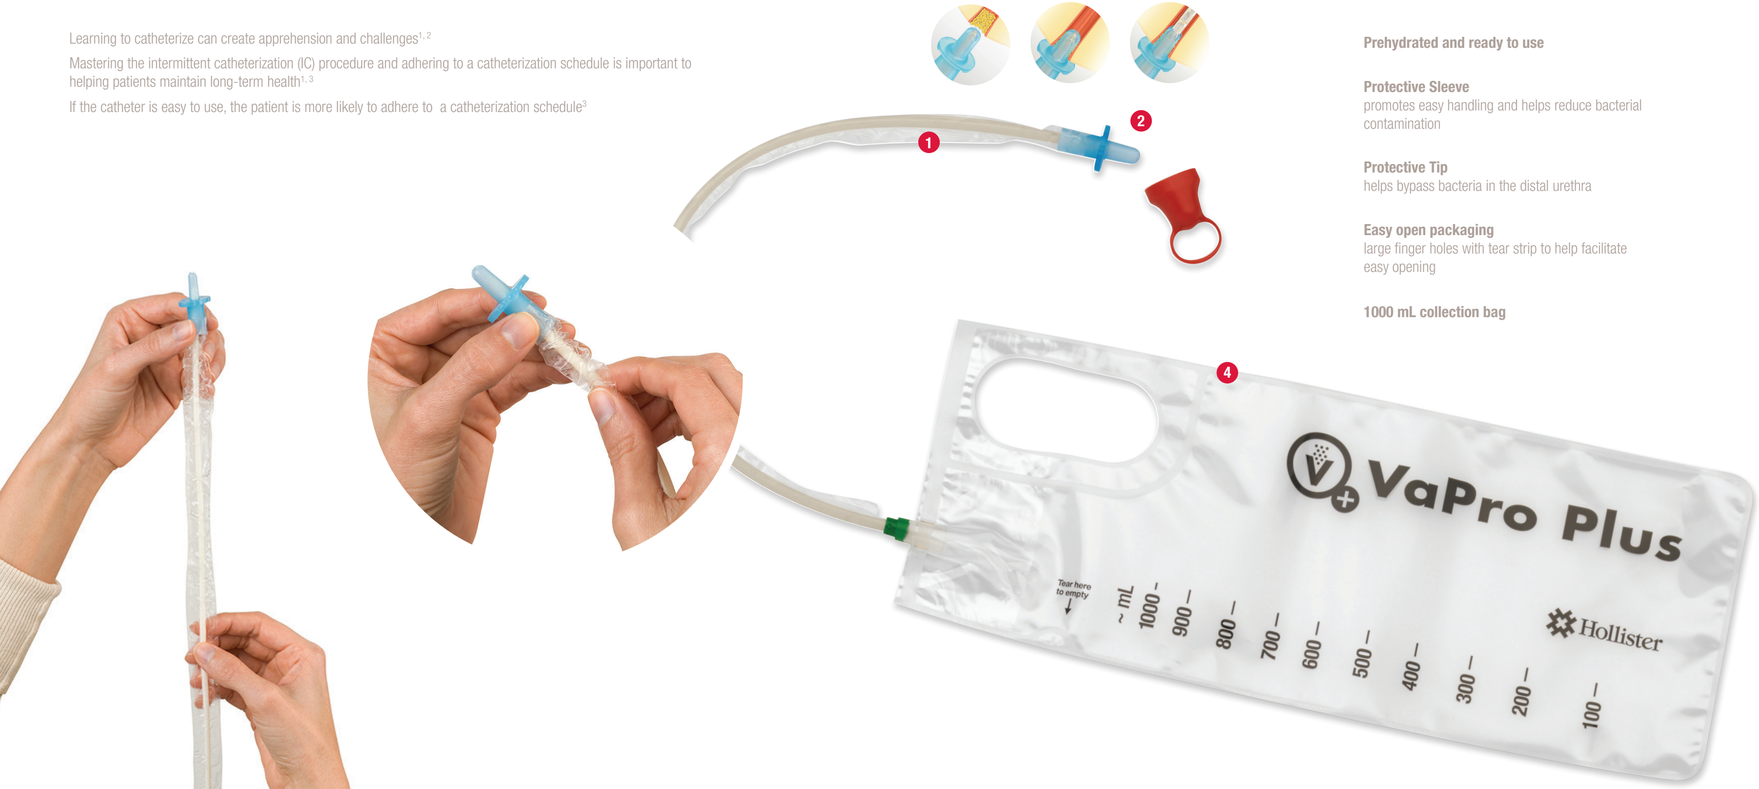

Mastering the intermittent catheterization (IC) procedure and adhering to a catheterization schedule is important to helping patients maintain long-term health[1, 3]

If the catheter is easy to use, the patient is more likely to adhere to a catheterization schedule[3]

The VaPro catheter is designed to help reduce bacterial contamination and be easy to use

All VaPro products use the same catheter - only one training approach in needed

In an independent assessment of 38 healthcare professionals who teach long term catheter users to intermittent catheterize, 89% of respondents who evaluated the VaPro catheter were “likely” or “very likely” to recommend the VaPro catheter with “ease of use” and reduced contamination as the most often mentioned reasons[4]

Prehydrated and ready to use

Protective Sleeve
promotes easy handling and helps reduce bacterial contamination

Protective Tip
helps bypass bacteria in the distal urethra

Easy open packaging
large finger holes with tear strip to help facilitate easy opening

1000 mL collection bag

Provides the right balance of ease of use, protection and convenience

No compromise on protection for discretion - no touch catheter with an integrated collection bag in a pocket-sized package
