Get it right from the start

A good start to catheterization is vital for many reasons. Your bladder function affects your well-being, not only in the beginning but in the long-run too. Therefore, the choice of catheter matters, as does the knowledge and support along the road.

Within time, self catheterization will be a natural part of your daily life. Self catheterization closely mimics the natural way and puts you in control.

Working with catheters for over 30 years, where we have met thousands of users, we are confident in our cause.

LoFric® Origo™ was developed with the help of healthcare professionals and hundreds of men practicing self catheterization. It is designed to address both your medical and lifestyle needs. It should be easy to carry and use anywhere – without ever making concessions to health and safety.

88% of prescribers will keep prescribing LoFric Origo.¹

77% of users want to continue with LoFric Origo.¹

1. Market research, 389 respondents. Wellspect HealthCare. 2013

Easy for beginners

LoFric Origo offers safe catheterization in a clever package.

The outside

Discreet design

Package doubles as disposable pouch.

Fits in a pocket

Foldable to pocket size and easy to bring along.

Instant activation

– always fresh

All it takes is a gentle squeeze to activate the catheter for use.

Easy to open

The convenient peel-open label makes it easy to top open and access the activated catheter.

Adhesive tab for reliable hanging

For reliable attachment to any dry and clean surface.

7 out of 10 users think the Insertion Grip makes LoFric Origo easy and hygienic to handle.¹

9 out of 10 users think LoFric Origo is easy to handle.¹

8 out of 10 users think LoFric Origo is easy to fold and carry.¹

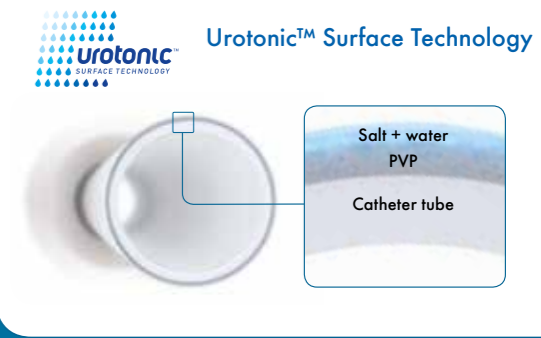

The inside

Comfortable and safe during insertion and withdrawal

The patented Urotonic™ Surface Technology (UST) ensures that the catheter remains smooth, comfortable and safe, both during insertion and withdrawal.

Hygienic and easy to handle

The adjustable insertion grip gives full control without having to touch the catheter tube during insertion. This means you do not risk contaminating the catheter, which minimizes the risk of infection.

¹. Market research, 389 respondents. Wellspect HealthCare. 2013

Great for long-term use

We believe urethral health and staying free from infections is crucial for a good life, therefore LoFric catheters are designed to maintain good urethral health in the long-term.

To think long-term is important. Complications like urethral trauma, strictures and urinary tract infections (UTI) might not be noticeable from the very beginning. For a long-term urethral health, make sure to choose the right catheter – right from the start.

LoFric reduces the risk of both pain and damage...

LoFric catheters are coated with our unique Urotonic™ Surface Technology, which means that LoFric's surface has the same properties as your urethra – the salt concentration is the same as in urine. This ensures that the catheter remains smooth, comfortable and safe, both during insertion and withdrawal.

...and it is scientifically proven

LoFric are the only catheters proven in multiple studies to be safe for long-term use.

0% trauma after 5–9 years with LoFric.¹

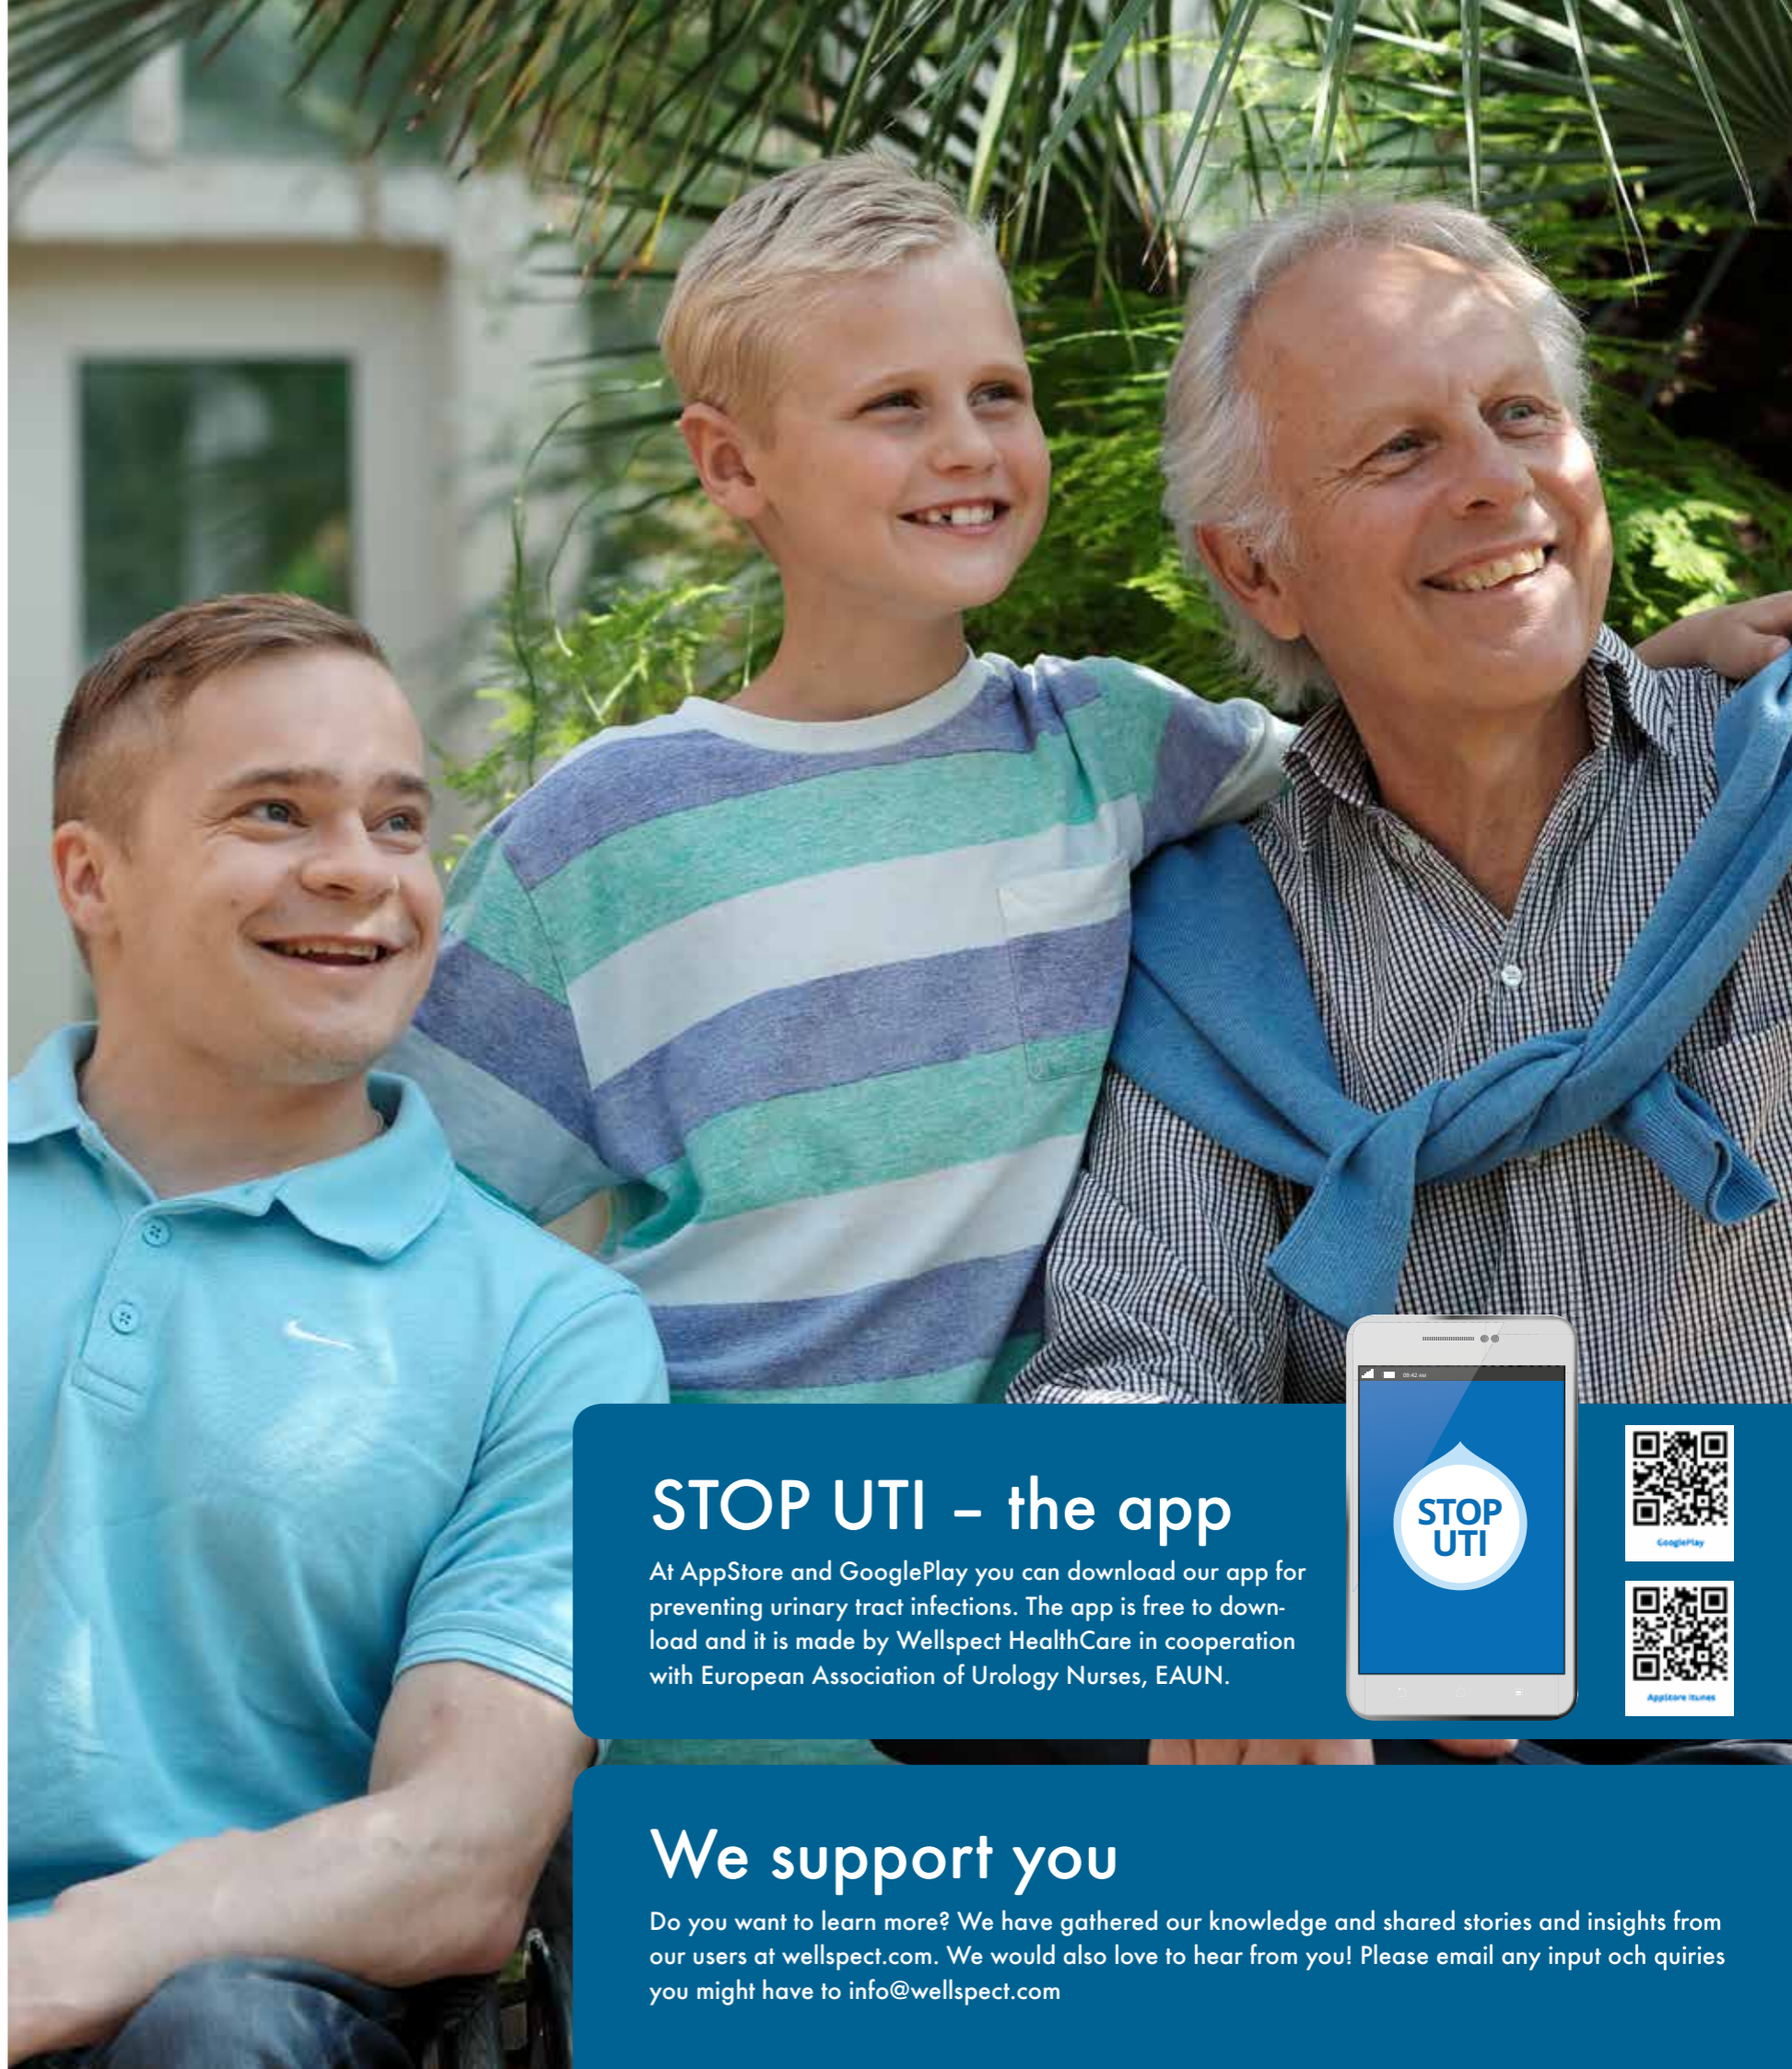

64% lower expected risks of UTIs.³

10–20 times lower expected risk of strictures.²

43% lower expected risk of hematuria.³

STOP UTI – the app

At AppStore and GooglePlay you can download our app for preventing urinary tract infections. The app is free to download and it is made by Wellspect HealthCare in cooperation with European Association of Urology Nurses, EAUN.
